

**ABSTRACT OF THE DISCLOSURE****ORIGIN DEVICE BASED CALLEE IDENTIFICATION**

5        A method, system, and program for origin device initiated  
callee identification are provided. At an origin device, a voice  
utterance of a callee is detected from a destination device. A  
callee identity associated with the voice utterance is identified  
at the origin device, such that the callee identity is  
10 transmittable as an authenticated identity of the callee for a  
call. A caller may select whether to continue a call dependent  
upon whether the callee identity is preferable. In addition, an  
intermediary device may receive the callee identity and specify  
services available during the call according to the callee  
15 identity.
